

FOREG[®]

SHELVING SYSTEMS

EVERYTHING IN PERFECT ORDER!

Neatly ORGANISED.

Archived files need to be quick and easy to retrieve. To achieve this, a clear arrangement and straightforward structures are essential. After all: you needn't know everything but you need to know how to find out.

Shelving systems made by Forster make this an easy task for you. Whether it is archives, museums, repositories or open-access libraries – Forster's perfectly structured and smoothly functioning archiving systems turn filing and retrieving into a pleasurable activity.

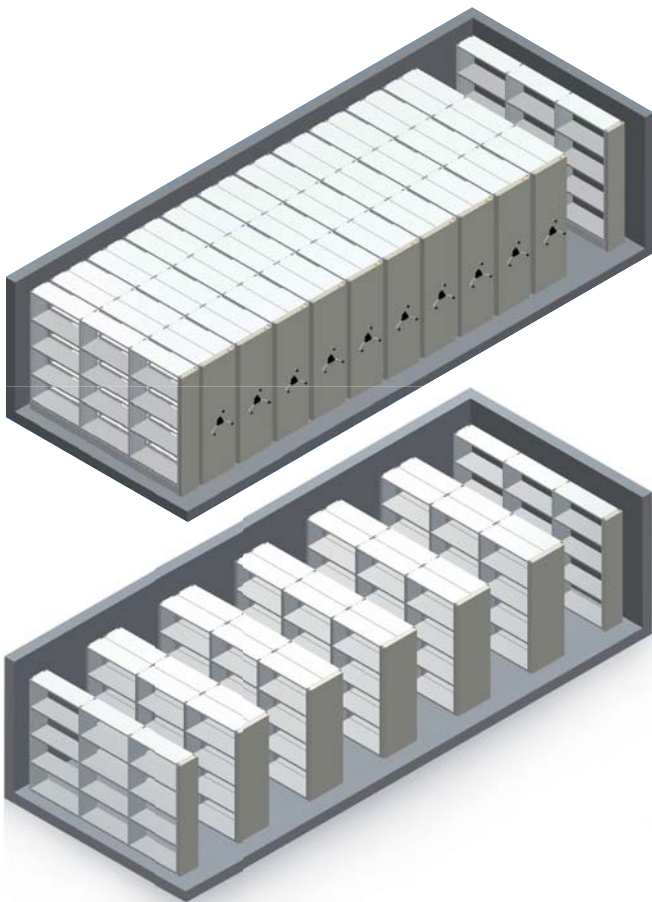

FOREG[®] – shelving to keep think organised

VOLUME over SPACE.

Space is always at a premium. When planning its filing and archiving system, a business most of all wants to save on space and use what space it has to the best possible advantage. Fortunately, FOREG shelving systems really are small miracles when it comes to saving space. In adapting to what is possible, FOREG shelving systems offer optimal solutions for day-to-day needs – regardless of whether it is a small filing cabinet, a large office archive, a museum or a library. Shelves designed as mobile systems make even better use of the available space by doubling the storage capacity. And room height permitting, we even supply multi-storey shelving systems.

FOREG[®] – shelving to create space

Heavy loads moved EFFORTLESSLY.

Moving heavy loads calls for ease of handling. A system of tracks perfectly matched to the drive allows moving even heavy loads with little effort along a FOREG shelving system. Whether you choose a manual drive, crank drive or electric drive – you will be sure of safe, effortless movement, easy handling and smooth operation.

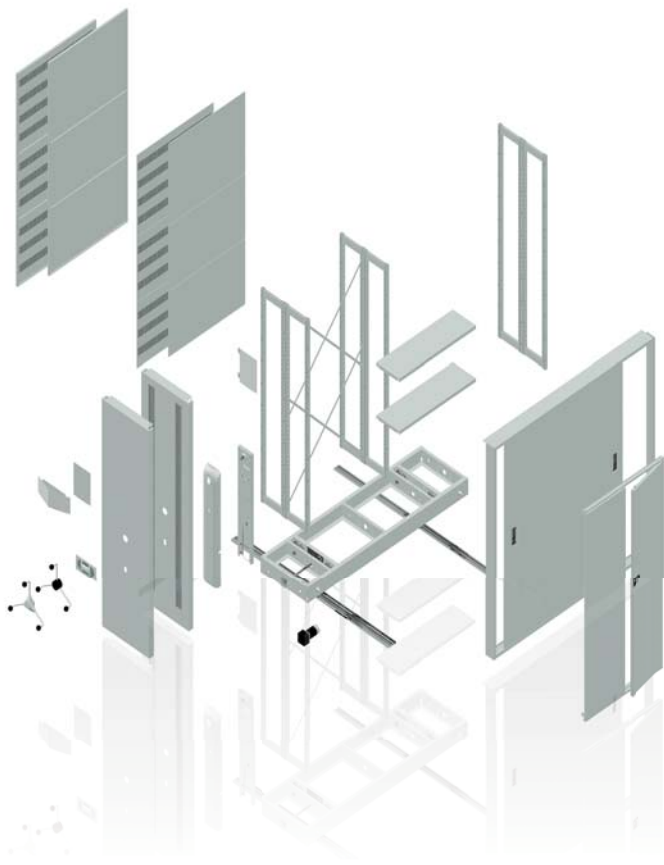

FOREG[®] – moving heavy loads with ease

Freedom of DESIGN and PLACEMENT.

FOREG shelving systems are perfect in adapting to individual conditions. A large range of sizes, frames and end panels, as well as the enormous scope of accessories available help fit each shelf exactly to its place. Naturally the main consideration is on what is to be archived. By accounting for requirements and local specifics we design solutions for every shelving need. A modular system allows us to interchange, combine and extend components exactly as required.

FOREG[®] – achieving systematic storage

Delighting in COLOURS.

Shelving typically provides the backbone of interiors. It is exactly for this reason that FOREG shelving systems can be fully customised to their architectural environment. We offer end panels made of metal, timber or glass as well as individualised colour schemes. And for those who want to add their very own touch we will imprint the FOREG shelf with your favourite image.

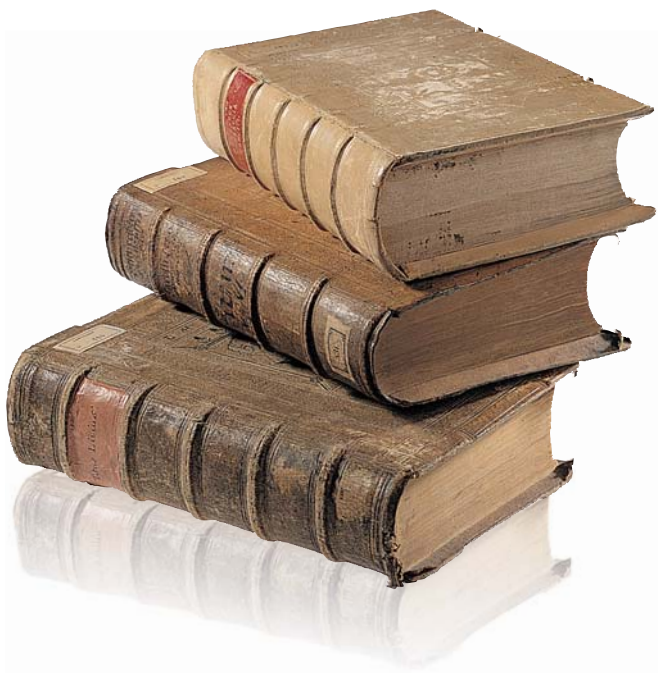

FOREG[®] – colour your archives

STORING for future generations.

Valuable cultural property, heritage items, collections that reach back through the ages, deeds and exhibits from a thousand years ago – they all need safe storage. FOREG shelving systems help ensure their continued preservation. Long-term archiving is an important investment for science and research. It's good to know that the shelves themselves are also guaranteed to have a long working life.

FOREG[®] – the durable backbone for enduring storage

CONCENTRATED COMPETENCE.

Forster is an internationally operating business that combines several subsidiaries and partners. The know-how of the staff active within our network provides the groundwork for innovative shelving systems of the highest quality. And every new challenge is seen as an opportunity for further improving our expert skills.

Our specialists cooperate with customers, users and architects in order to maximise the benefit of our solutions. Top-quality materials and state-of-the-art production technologies make sure that our customers get flawlessly performing products of maximum ease of use.

FOREG shelving systems are based on functionality, utility, economy and superior quality. These properties provide the scale against which every new development is judged, as well as the foundation for our all-comprehensive full service. Ranging from project-based planning to design to industrial production to on-site commissioning, we take pains to meet the most stringent expectations. The result of our efforts is our distinguished product quality, regularly confirmed by inspection seals and certificates.
